

Waste bin with knee opening 20 litre plastic

In an environment where hygiene is crucial, the PlastiQline plastic waste bin earns pride of place. The ingenious knee operation make the transfer of bacteria via the hands a thing of the past. In hospitals and care institutions hygiene is of utmost importance. Any transfer of bacteria must be prevented at all cost. The knee-operated PlastiQline plastic waste bin prevents any undesired unhygienic contamination. How does it work? The minute you press your knee against the lower container, the lid will pop open. Once the waste is deposited and the pressure on the lower container removed, the lid will pop back in its original position automatically. Do you attach great value to optimal hygiene? Then request a quote for the PlastiQline Knee-operated 20 Litre Plastic Waste Bin.
